The "Tao" of "Wow" and "Ow" of Physics

"Flamenco Chuck" Keyser

(BuleriaChk@aol.com)

Consider the following:

Man cannot both know and not know the universe at the same instant.

1. Let c be the "Ow" creation rate of experimental (known) results (which can change as more results are verified); i.e., what man knows at any given instant.

2. Let v be the "Wow" creation rate of imagination (including mathematical analysis) i.e., what man does not know at any given instant.

As results are verified, a tiny amount of Wow is transferred to the Ow as progress is made.

Since v and c are independent of each other at any instant of "Ow" and "Wow", they can be represented in a two dimensional orthogonal vector space ("Ow","Wow").
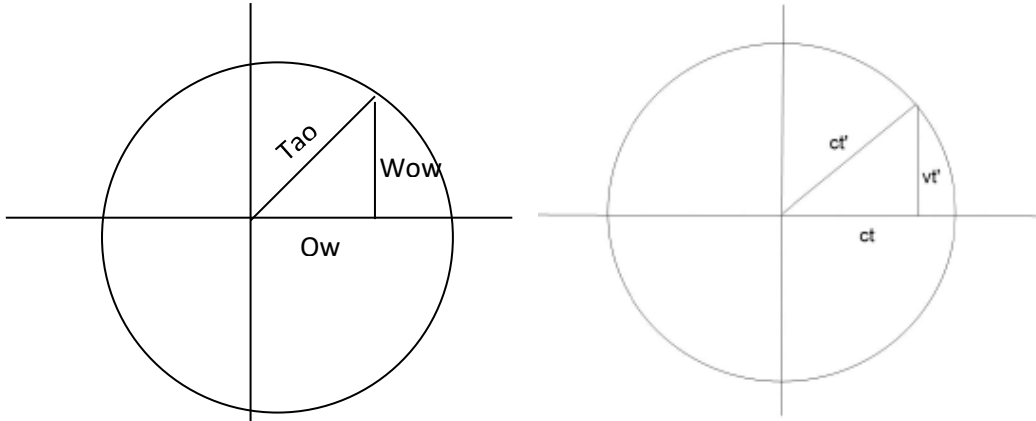

In order to account for all possibilities of Ow and Wow, they can be related by the triangle equality via the scaling factors t and t' in this two dimensional vector space (ct,vt'), where t is the "Ow" creation time for any given "Ow" and t' is the "Wow" creation time for any given "Wow".

Since all possible Ow's and Wow's are included by this model, the resultant must be god, which we call "Tao", or ct'.

Then we have that:

$$(Tao)^2 = (Wow)^2 + (Ow)^2$$

i.e., $(ct')^2 = (vt')^2 + (ct)^2$

The Southern California (Mellow) Surfing Culture

(As "Wow" decreases, ct' rotates cw from vertical (The Great All-Encompassing "Wow") to horizontal (The Great All-Encompassing "Ow"), at which point ct' = ct.

When the rotation is ccw, man can achieve the Great All-Encompassing "Wow", at which point he will never blow his Buddhist Cool, since this Wow is mellow, and generated by the California Surfing Culture... *
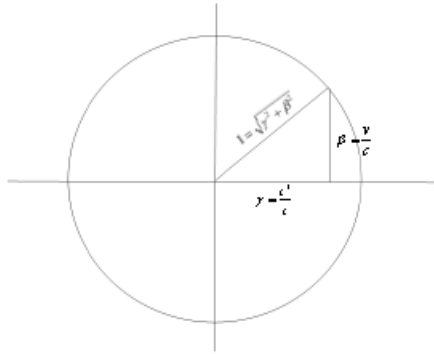

(Note: The California (Mellow) Surfing Culture does not admit negativity in any form..)

When solved for t', this equation gives us the "Ow" dilation equation:

$$t' = \left(\frac{t}{\sqrt{1 - \left(\frac{v^2}{c^2} \right)}} \right) = \frac{t}{\sqrt{1 - \beta^2}} = t\gamma$$

$$\beta = \frac{v}{c}, \frac{t'}{t} = \gamma, t' \geq t$$

We can divide both sides of the equation by Tao, which yields: $1^2 = (v/c)^2 + (t/t')^2 = \beta^2 + \gamma^2$

That is, $\beta = \dfrac{v}{c}$ is interpreted as a relation between velocities in space-time corresponding to

the "Wow" of physics, and $\gamma = \dfrac{1}{\sqrt{1 - \dfrac{v^2}{c^2}}}$ is interpreted as a relation between masses in

energy-momentum, then since v is related to c in both cases, γ corresponds to the relative density of "Ow", and β corresponds to the relative density of "Wow".

This shows the Unity of Tao and can be multiplied to create whatever additional universes a member of the SC(M)SC wishes to create (if any)... 😊

TRUST me - and send money for beer and pizza... 😊

For further reference, see "The Creation of the Universe" on my website in the Relativity section.

Note: Some writers refer to the "Ow" as a "mass creation rate", where $m_0 = ct_0$, while others refer to it as a "ruler creation rate", where $x_0 = ct_0$. It all depends on whether you have your foot on (or in) the ground or not... 😊

----

*Albert Einstein is considered to be The Great Guru of the Southern California Mellow Surfing Culture, with disciples John Wheeler, Kip Thorne, and Charles Misner. Stephen Hawking and Leonard Susskind have infidel tendencies, and are therefore suspect... 😊

That is, once one declares c as the speed of light to be a constant w.r.t. space-time, one can happily go through life ignoring the results of Maxwell, Coulomb, Ampere, Faraday. and

GPS technology, but if you're happy where you are, it doesn't matter if you're lost... 🙂

In any case, the only Einstein observers I'm aware of are thee and me, and I'm not so sure about thee.. 🙂
